

The Full Stack Developer Roadmap

Becoming a full stack developer requires a knowledge of LOTS of technology. This roadmap was built so you can understand what technology you should learn in what order.

Each section is dense so go at whatever pace suits you.

HTML/CSS

JavaScript JS

Only learn vanilla JavaScript at this stage. Avoid the JavaScript rabbit hole.

Programming

Databases

APIs

Security

Frontend Libraries

OPTIONAL

CSS Frameworks

TypeScript

Docker

Cloud

DevOps

There is always going to be technology to learn so learn it based off of what you are currently going through at the time.

You will always be learning when it comes to being a programmer.

Suggestions? email: sydney@thebetter.dev :)
